Section 3. Composition / Information on Ingredients

Ingredient Name: The individual components of Precision Board PBLT are composed of only two ingredients. They are polyurethane foam and carbon dioxide. Neither is a hazardous material under conditions of normal use. When the ingredients of Precision Board PBLT are mixed together, a chemical reaction takes place which transforms the ingredients into a completely new material – a polymer called polyurethane foam.

This chemical reaction is exothermic. The heat generated by the reaction causes the formation of carbon dioxide gas. It is the carbon dioxide which bubbles through the plastic while it is turning into a solid that creates the polyurethane foam.

Polyurethane foam is not hazardous, is non-toxic, and is an inert polymer.

All components of Precision Board PBLT are listed on the TSCA Inventory. None of the components in Precision Board PBLT are listed by IARC, NTP, OSHA, or ACGIH as a carcinogen.
